Subject: Central Sands Dairy's most recent monitoring well test results
Attachments: Chern 111517 Rev.pdf

Hi Cheryl,

Attached are the latest monitoring results from CSD. This is the highest reading of nitrate ever in this batch--88 mg/L. It was at a well in the interior of the facility.

Also, another private well (not on record yet) downgradient of manure application fields for Central Sands Dairy has turned up bacteria and nitrates have exceeded the standard for health at 11.4 mg/l. Ex. 6 Personal Privacy (PP) private well is at 34.4, but no bacteria, as of her latest well test.

Please add this information to what you have already compiled.

Thank you,

Ex. 6 Personal Privacy (PP)
